

The image displays a complex radial phylogenetic tree, likely generated using a software like PhyML or RAxML. The tree is rooted at a central node and branches outwards in all directions. The branches are labeled with species names and accession numbers, such as "Pygoll_GCRY01004639.1.p1 | Hira", "Manpia_Gene.57212 | Hira", "Styinc_Gene30730_m30730 | WD40,Hira", and "Majlak_MALJA_28552.mRNA.1 | WD40,ANAPC4_WD40,Hira". The tree is highly branched, with many labels indicating species names and accession numbers. A blue dot is visible on one of the branches, possibly indicating a specific point of interest or a mutation site. The tree is rooted at the center and radiates outwards in all directions.
